

Bee Wise — Immunize!

Healthcare professionals recognize vaccines as the top medical achievement of the 20th century. Despite all the progress that's been made in this area, vaccine-preventable disease—such as measles, mumps, pertussis, influenza and meningitis—and even some types of cancer—are still around. That's why it's so important to ensure you and your family are protected against these diseases through vaccinations.

Immunizations for people of all ages are available at the following locations.

Call ahead to find out if the shots you want are available and about possible costs for the shots.
